**With guidance from key tape and hardware manufacturers, Turtle Cases have been uniquely designed to protect your valuable data during transport and storage.**

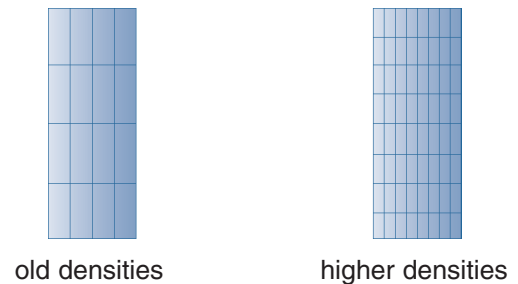

Turtle Cases are built for business professionals who understand the value of their data and the precautions necessary to protect it.

**Key items to consider when purchasing media transport and storage containers:**

- ◆ **Stakes are higher** – Each cartridge or disk now holds significantly more data than in the past; consequently the cost to the business of losing the data is much higher. As an example, a 3480 cartridge holds 200 MB of data while a 3592 cartridge holds 300 GB – 1,500 times more!

- ◆ **Requirements are tougher** – The density of the data on all tape formats continues to increase dramatically. Damage to the same area, affecting the exact same amount of space on a tape, will result in much greater loss of data.

- ◆ **Data's enemies haven't changed**

- Tape edge damage from shock/impact
- Debris from foreign contaminants
- Temperature and/or humidity extremes

- ◆ **Turtles get the job done!** – The extra protection provided by Turtle cases is more important than ever. Turtle cases offer the following features to protect your data:

- Double wall case which reduces G forces resulting from impact.
- Molded dividers sized to the precise dimensions of each tape format cradle each cartridge and prevent shaking/rattling.
- Trapped air space provides insulation from external temperature changes
- **Metal latches which snap easier, more securely and last longer.**
- **Warranted for life against manufacturing defects.**
- Use of foam only with tape and disk formats where plastic “jewel type” cases are employed protects media from contact with debris generating agents.
